

Public Sector and Healthcare Offerings

How we're working with organisations to help them achieve new priorities in the face of COVID-19 and economic instability.

How are we working with our clients to shift priorities?

Rapid Scale-Up: Alfred Health

Problem: Essential industries are experiencing acute staff shortages in key roles. To function at full capacity, they require modern technology solutions to efficiently source, screen and hire.

Solution: Leading Melbourne hospital, Alfred Health, creates seamless, fast and efficient hiring by leveraging the LiveHire and SAP SuccessFactors deep integration.

Direct Sourcing of the Contingent Workforce: Telstra Health

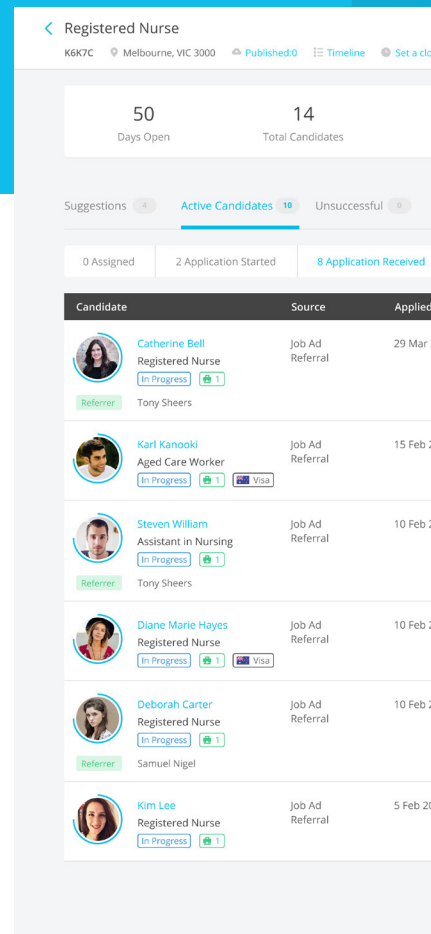

Problem: HR and Procurement teams are looking for ways to reduce spend on contingent workforce programs, while maintaining productivity and workforce flexibility.

Solution: By supplying a direct sourcing model, LiveHire has allowed Telstra Health to reduce recruitment costs by \$1.2 million.

Redeployment of the existing workforce: Australian State Government Agencies

Problem: Public sector agencies need greater visibility of workforce skills and ability to communicate on a large scale, to effectively redeploy employees into new COVID-19 roles.

Solution: We're working with state governments to create a state-wide view of workforce skills across multiple agencies and enabling rapid communication to redeploy thousands of employees.
